**Live Captioning and Subtitling can be complicated and expensive. Breaking news or last minute changes makes it even harder to coordinate with a human captioner, confirm the audio feed is clear and hope the captioner can understand what is being said and get the words right. It's not easy.**

VoCaption provides broadcasters with accurate, real-time speech-to-text processing in 31 languages to produce live captioning or subtitles for news, weather and sports, breaking news and other live events at a fraction of the cost of human captioners.

VoCaption delivers live, automatic captions and subtitles across a comprehensive range of linear and OTT implementations. It can be used stand-alone with a 3rd party encoder, but its full benefits are felt when used in conjunction with BroadStream's market-leading Polistream captioning encoder or OASYS Integrated Playout, where it can automatically detect the absence of subtitles and implement emergency subtitling automatically and turn off when subtitles re-appear thus reducing the volume of fines a broadcaster may incur for the temporary loss of subtitles.

VoCaption Broadcast

*In testing. Release dates pending.

Advantages of using VoCaption as part of your captioning or subtitling workflow:

- Results are automatically recorded to an EBU-TT file for archive, compliance, repurposing and metadata harvesting.

- Includes a Custom Dictionary for pre-loading unique names, foreign words, local and regional words and phrases that automatically improves the accuracy rate.

- Great for Emergency Captioning and Subtitling. Can auto-detect the presence or absence of subtitles and begin providing captions if none are present.

- VoCaption is a complimentary product to re-speaking workflows to increase productivity at a reduced cost.

- VoCaption makes it easy for Government, Education, Military and Business meetings and presentations to provide live subtitles for group gatherings to support the presenters and properly include those who need extra assistance due to hearing or language issues.

- Currently available in Global English and 30 other languages.

Current Language Support				
Arabic	Dutch	Hungarian	Romanian	Russian
Bulgarian	French	Italian	Malay	Slovak
Catalan	German	Japanese	Mandarin	Slovenian
Croatian	Global English	Korean	Norwegian	Spanish
