

VoCaption Live uses Automatic Speech Recognition to deliver live captions at a fraction of the cost of professional captioners.

- Speech-to-text technology has improved dramatically.
- Accuracy is now comparable to professionals in many situations.
- The availability of highly trained, professional captioners is declining.
- Live programming, especially news, is growing along with the number of channels.
- More people, not just the hearing impaired, use captions when they watch TV.

Automated Speech Recognition, ASR, for live captioning is no longer the future but the present and necessary to fill the gaps caused by current industry trends.

HOW IT WORKS

VoCaption-Live for Commercial, Government, Religious, Educational and Corporate broadcast facilities.

VoCaption Advantages

- Automatically converts program audio into real-time, live captions.
- Multiple Custom Dictionaries improve accuracy for unique names, foreign words and local geographic references.
- Alternative words list and profanity filter provide automatic substitutions.
- Auto-detects the absence of captions and activates the system for emergencies when paired with Polistream.
- Great for breaking news or long form programming.
- Don't pay a professional for a full hour if captions are only required for a few minutes.
- Compliments re-speaking workflows to provide breaks for captioners.
- Output is saved to EBU-TT or SRT files for repeats or archiving...great source of metadata for SEO and social media.
- Edit files to improve captions...it's quicker than creating from scratch.
- Optional caption inserter available as an upgrade to an existing Polistream or OASYS Integrated Payout solution.

Output Options

- Ctrl+A— Serial & IP for use with EIA608/708
- Newfor— Serial & IP
- EBU-TT Pt 3—Websockets over IP

BroadStream partners with Speechmatics and other speech engines to deliver solutions that are cost-effective and accurate.

Current Language Support

Arabic	Dutch	Hindi	Lithuanian	Romanian
Bulgarian	English	Hungarian	Malay	Russian
