

VoCaption is now available as a Cloud or On-Premise Automatic Speech Recognition Solution.

Automated Speech Recognition, ASR, for live captioning is an essential element of modern workflows to better serve your viewers and save precious time and money.

- Speech-to-text technology has improved dramatically.
- Accuracy is now comparable to professionals in many situations.
- The availability of highly trained, professional captioners is declining.
- Live programming, especially news, is growing along with the number of channels.
- More people, not just the hearing impaired, use captions when they watch video and TV.

HOW IT WORKS

US Sales: +1 404-327-8300 | International: +44 1473 831700 | sales@broadstream.com | <https://broadstream.com>

VoCaption, Live Captioning for Commercial, Government, Religious, Educational and Broadcast facilities.

VoCaption Advantages

- Can be hosted locally as a Docker Container within Linux VM or hosted in the Cloud
- Automatically converts program audio into real time, live captions.
- Custom Dictionaries improve accuracy for unique names, foreign words and local geographic references.
- Alternative words list and profanity filter provide automatic substitutions.
- Auto-detects the absence of captions and launches for emergencies when paired with Polistream.
- No need to pay a professional for a full hour if captions are only required for a few minutes.
- Output is saved to EBU-TT or SRT files for repeats or archiving...great source of metadata for SEO and social media.
- Edit files to improve captions...it's quicker than creating from scratch.
- Available as an upgrade to existing Polistream, OASYS Integrated Playback solution, or Broadcast Pix Live Streaming Hybrid Solution.
